ZeroWeave®
Airtight duct material

ZeroWeave is the right solution for applications where you need to move large volumes of air over a long distance and still maintain optimum air mixing. Zero-Weave can be combined with all KE Fibertecs type of hole patterns and nozzle configurations.

- ZeroWeave is an airtight material so the filter efficiency is zero. All the air is distributed through holes or nozzles.
- No PVC, halogens or other harmful substances. The material can be lasercut to improve the finished quality.
- Fire tested acc. to EN13501 B-S1-d0 without any finishing treatment.
- No condensation issues when used in environments below 90% RH.
- Washing not needed in order to maintain functionality. Only for hygienic and aesthetic reasons.

ZeroWeave is an airtight, low-maintenance material with a wide range of application possibilities such as supermarkets, large sports arenas, swimming pools, high-bay industrial facilities, and rooms with high dust generation or limited accessibility.
