

# sports/leisure sports and multi-purpose halls

KE Fibertec

- we supply air  
quality with energy-  
efficient ventilation  
solutions

Fabric ducts are used for heating and ventilating of all types of sports arenas.

KE Fibertec has many years of experience in dimensioning of energy-efficient systems that meet the demands for quality air distribution both during practices and during events.

Fabric ducts ensure correct ventilation and heating throughout the arena and seats and without compromising comfort.

Maintenance of KE DireJet® systems (nozzle systems) is similar to that of conventional systems, and they are much easier to handle and install.

We offer many well-documented reference projects:

Wen Ice Arena, USA

Curry College, USA

Thialf Heerenveen, the Netherlands

Friskis & Svettis Fitness Center, Sweden

University of Arkansas, USA

Gigantium Ice Arena, Denmark

### Benefits of KE Fibertec ventilation ducts:

- Cooling, ventilation and heating in one.
- No draft in the seating area.
- Good air quality and uniform temperature throughout the arena.
- Layout allows for various operational strategies in order to meet ventilation demands for any type of arena.
- Many layout and color options to match hall architecture.
- Lower initial costs compared with conventional systems.

### CHOOSE SUSTAINABLE VENTILATION

All KE Fibertec fabrics are tested and approved according to the Oeko-Tex® Standard 100.

Our production is certified according to the ISO 14001 standard (Environmental Management System).

Transportation and disposal of fabric duct systems produce less CO<sub>2</sub> pollutants than conventional steel ducts.
