

Fabric ducting Schools

KE Fibertec supplies tailored and sustainable ventilation solutions

KE Fibertec helps to make sure students do not lose focus by providing air distribution solutions for class rooms.

Round or halfround KE-Low Impulse fabric ducts, flush mounted with the ceiling, distribute air with comfortable air velocities and low noise.

KE Fibertec's fabric ducts are well-suited for demand-driven ventilation (VAV systems that are adjusted according to the CO₂ content in the room).

Fabric ducts from KE Fibertec are also very well-suited for retrofit applications.

Benefits of KE Fibertec fabric ducting:

- Efficient and uniform distribution of fresh air
- No draft and no dead zones
- No condensation - no insulation required
- Lightweight fabric ducts that may be fitted to any type of ceiling
- Easy to maintain
- 1600 custom colors ensure that the ducts can be tailored to any architectural design
- Silent air distribution - documented down to NC-20/25
- Clean air as the systems filter out airborne dust particles
- Low initial costs compared with conventional solutions

We offer many well-documented reference projects:

Monash University, Australia

Billy Bubbles, England

Miller Grove High School, USA

Paul Mitchell Cosmetology School, USA

Walkden School, England

Hull University, England
