

Fabric ducting Light industry

KE Fibertec supplies tailored and sustainable ventilation solutions

Fabric ducts solve industry's need for distributing fresh air to the employees without drafts that may lead to increased sick leave.

The solutions of KE Fibertec are based on advanced technical calculations ensuring that the result lives up to expectations. The ducts are easy to install and may be moved if the production layout should change.

KE Fibertec's fabric ducts require only a minimum of maintenance which contributes to minimizing the number of unnecessary interruptions in production.

Benefits of KE Fibertec fabric ducting:

- Efficient and uniform distribution
- No draft - well-suited for energy-efficient zone ventilation (displacement)
- No condensation - no insulation required
- Lightweight fabric ducts that may be fitted to any type of ceiling
- Wide range of products offers high flexibility in choice of solution
- Easy to maintain - no growth of microorganisms
- 1600 custom colors ensure that the ducts can be tailored to any architectural design
- Well-suited for retrofitting within existing production facilities

We offer many well-documented reference projects:

Drukkerij Geostick, the Netherlands

Hickey Freeman, USA

Johnson Controls, USA

Ecophon, Sweden

IAI Towers, Denmark

Daikin Texas Technology Park, USA
