

industrial ventilation laboratories and clean rooms

KE Fibertec
- we supply
quality and
sustainable ven-
tilation solutions

KE Fibertec's fabric duct solutions are often chosen for use in laboratories due to their inherent ability to handle large volumes of air with minimal air velocity and noise in the room. This is important since high air velocities and noise compromise the function of the room and the equipment in it.

The systems are especially well-suited for laboratories with fume hoods or for rooms with varying demands (VAV systems).

KE Fibertec has long-term experience in supplying fabric ducts for clean room applications.

We offer many well-documented reference projects:

Dental clinic Tilburg, the Netherlands

Bespack, UK

Southampton University, UK

BAT Millbrook, UK

Uniquema, the Netherlands

Boots Pharmaceuticals, UK

Benefits of KE Fibertec ventilation ducts:

- Efficient and uniform distribution of large volumes of air.
- No draft and no dead zones.
- Lightweight fabric ducts that may be fitted to any type of ceiling.
- Easy maintenance - no growth of microorganisms.
- 1600 custom colors ensure that the ducts can be tailored to any architectural design.
- Silent air distribution - down to NC-20/25.
- Clean air as the systems filter out airborne dust particles.
- The large surface of the fabric duct ensures low air velocities throughout the room.
- No short-circuit around the exhausts.

CHOOSE SUSTAINABLE VENTILATION

All KE Fibertec fabrics are tested and approved according to the Oeko-Tex® Standard 100.

Our production is certified according to the ISO 14001 standard (Environmental Management System).

Transportation and disposal of fabric duct systems produce less CO₂ pollutants than conventional steel ducts.
