

sports/leisure swimming pools

KE Fibertec

- we supply air
quality with energy-
efficient ventilation
solutions

High impulse systems from KE Fibertec provide efficient air distribution in swimming pool hall applications.

KE Fibertec's textile ducts prevent corrosion in ducts and fittings, condensation on ceilings and windows as well as problems of stagnant "chlorine air".

With years of experience our engineers are able to dimension an air distribution system that not only fits the design of the pool hall but also provides energy-efficient distribution of air.

We offer many well-documented reference projects:

Centennial, USA

Egmont, the Netherlands

Livingwell, Peterborough, UK

Hasmark Strand Camping, Denmark

Swimming pool, Fulham, UK

Hallenbad Einbeck, Germany

Benefits of KE Fibertec ventilation ducts:

- Efficient and uniform distribution of fresh air.
- No draught and no dead zones.
- Free of condensation on windows and other cold surfaces - no insulation required.
- Lightweight textile ducts that may be fitted to any type of ceiling.
- 1600 custom colours ensure that the ducts can be tailored to any architectural design.
- Uniform temperature and distribution of moisture reduce energy demand for dehumidifiers.
- Silent systems.
- Low velocities across the water surface reduce chlorine evaporation.
- Visually attractive solutions.

CHOOSE SUSTAINABLE VENTILATION

All KE Fibertec textiles are tested and approved according to the Oeko-Tex® Standard 100.

Our production is certified according to the ISO 14001 standard (Environmental Management System).

Transportation and disposal of textile duct systems produce less CO₂ pollutants than conventional steel ducts.
